

Public Information Workshop

September 9 and 13, 2010

WELCOME

The Florida Department of Transportation (FDOT) welcomes you to the Public Information Workshop for the Central Polk Parkway Project Development and Environment (PD&E) Study. The purpose of the meeting is to provide you with an update on the study, the schedule and present the nine recommended corridors that are proposed for further study. We are seeking your input on the recommended corridors and the information presented. The meeting format will consist of an informal open house beginning at 5:30 p.m. when project displays can be reviewed. An audiovisual presentation will be shown at 6 p.m. followed by time to discuss the project with study team members.

INFORMAL OPEN HOUSE - 5:30 p.m.

During the open house portion of the meeting, representatives from the PD&E Study team will be present to answer questions and discuss the nine recommended corridors and other project information shown on display boards. The draft purpose and need statement, which is the foundation of the Central Polk Parkway project, is available as a handout. The draft statement includes a summary of the existing transportation needs within the study area and the benefits that may result from the construction of this project.

PRESENTATION - 6 p.m.

FDOT representatives will show an audiovisual presentation to explain the process FDOT used to reduce the 29 preliminary project corridors displayed at public workshops in December 2009 to the nine recommended corridors presented today.

Q & A SESSION

Following the audiovisual presentation, representatives from the PD&E Study team will be available to receive your input and answer any additional questions at the poster board displays. If you would like to provide a written comment, please complete a comment sheet available at this meeting. Completed comment sheets can be placed in a comment box or mailed to the address on the back of the form by Friday, September 24, 2010. You can also submit comments on the project Web site. All comments received are appreciated and will be reviewed by the PD&E Study team.
